

Feeling Lucky?

Unfortunately, no matter how lucky we're feeling this March, luck won't save your business from the looming cybersecurity threats that all businesses face.

Did you know that the biggest threat to your company security isn't hackers, it's your employees? With the rampant rise in ransomware and the ever-increasing email messages per mailbox, employees have become the business owner's first line of defense.

But, why would employees seek to doom their own workplace? Don't they know any better by now? Since 90% of security breaches are inadvertent or caused by accident, it's safe to say that cybercriminals currently have the upper hand when it comes to fooling us into giving away our precious data and typically safeguarded information.

So how do we stop this epidemic? The best act of prevention is taking a proactive stance by training all employees on the latest cybersecurity threats and safety measures.

At CTTS, we offer a Security Awareness Training to guide your employees through the latest cybersecurity threats, educating and alerting them to the dangerous impact it can have on our business and personal life.

If you'd like to learn more or for a free demonstration, give us a call now: (512) 388-5559.

5 Signs You're About To Get Hacked – And What You Can Do To Prevent It

Hackers love to go after small businesses. There are many businesses to choose from, and many don't invest in good IT security. Plus, many business owners and their employees have bad cybersecurity habits. They do things that increase their risk of a malware attack or a cyber-attack.

Here are five bad habits that can lead to a hack and what you can do to reduce your risk.

1. Giving out your e-mail

Just about every website wants your e-mail address. If you share it with a vendor or e-commerce site, it's usually not a big deal (though it varies by site – some are more than happy to sell your e-mail to advertisers). The point is that when you share your e-mail, you have no idea where it will end up – including in the hands of hackers and scammers. The more often you share

your e-mail, the more you're at risk and liable to start getting suspicious e-mails in your inbox.

If you don't recognize the sender, then don't click it. Even if you do recognize the sender but aren't expecting anything from them and do click it, then DO NOT click links or attachments. There's always a chance it's malware. If you still aren't sure, confirm with the sender over the phone or in-person before clicking anything.

2. Not deleting cookies

Cookies are digital trackers. They are used to save website settings and to track your behavior. For example, if you click a product, cookies are logged in your browser and shared with ad networks. This allows for targeted advertising. There's no good way to tell who is tracking online. But you can use more secure web browsers, like Firefox and Safari.

These browsers make it easy to control who is tracking you. In Firefox, for example, click the three lines in the upper right corner, go into the Options menu and set your Privacy & Security preferences. Plus, every web browser has the option to delete cookies – which you should do constantly. In Chrome, simply click History, then choose “Clear Browsing Data.” Done. You can also use ad-blocking extensions, like uBlock Origin, for a safe web-browsing experience.

3. Not checking for HTTPS

Most of us know HTTP – Hypertext Transfer Protocol. It’s a part of every web address. However, most websites now use HTTPS, with the S meaning “secure.” Most browsers now automatically open HTTPS websites, giving you a more secure connection, but not all sites use it.

“Good IT security can be the best investment you can make for the future of your business.”

If you visit an unsecured HTTP website, any data you share with that site, including date of birth or financial information, is not secure. You don’t know if your private data will end up in the hands of a third party, whether that be an advertiser (most common) or a hacker. Always look in the address bar of every site you visit. Look for the padlock icon. If the padlock is closed or green, you’re secure. If it’s open or red, you’re not secure. You should immediately leave any website that isn’t secure.

4. Saving passwords in your web browser

Browsers can save passwords at the click of a button. Makes things easy, right? Unfortunately, this method of saving

passwords is not the most secure. If a hacker gets your saved passwords, they have everything they could ever want. Most web browsers require a password or PIN to see saved passwords, but a skilled hacker can force their way past this if given the chance.

Protect yourself with a dedicated password manager! These apps keep passwords in one place and come with serious security. Password managers can also suggest new passwords when it’s time to update old passwords (and they remind you to change your passwords!). LastPass, 1Password and Keeper Security Password Manager are good options. Find one that suits your needs and the needs of your business.

5. You believe it will never happen to you

This is the worst mentality to have when it comes to cyber security. It means you aren’t prepared for what can happen. Business owners who think hackers won’t target them are MORE likely to get hit with a data breach or malware attack. If they think they are in the clear, they are less likely to invest in good security and education for their employees.

The best thing you can do is accept that you are at risk. All small businesses are at risk. But you can lower your risk by investing in good network security, backing up all your data to a secure cloud network, using strong passwords, educating your team about cyberthreats and working with a dedicated IT company. Good IT security can be the best investment you make for the future of your business.

Free Cyber Security Audit Will Reveal Where Your Computer Network Is Exposed And How To Protect Your Company Now

At no cost or obligation, our highly skilled team of IT pros will come to your office and conduct a comprehensive cyber security audit to uncover loopholes in your company’s IT security.

After the audit is done, we’ll prepare a customized “Report Of Findings” that will reveal specific vulnerabilities and provide a Prioritized Action Plan for getting these security problems addressed fast. This report and action plan should be a real eye-opener for you, since almost all of the businesses we’ve done this for discover they are completely exposed to various threats in a number of areas.

REFER A FRIEND AND BE REWARDED

At CTTS we believe that referrals are the greatest form of flattery. If you know someone who is worried about any aspect of their business technology, do them a favor and put them in touch with us.

As one of our valued customers, you already know the benefits you get from our services:

Sleeping like a baby - we take care of your technology 24x7

Increased productivity - less downtime translates into more work time

No more worrying about security - we protect your data and your network

Enjoying more time for yourself - maximize your quality of life

By recommending partners, associates, or professional contacts, you can help them enjoy worry-free IT and reap some rewards for yourself:

Simply refer any company with 10 or more users to our office. Once we've completed our initial appointment with your referral, **we'll give you \$250!**

If the company then becomes a Client with CTTS, **we'll send you another \$250!**

To get started, visit our webpage here: <http://bit.ly/CTTS-Referral> and fill out the form, or give us a call now at (512) 388-5559.

Who Is Responsible For Your Corporate Culture?

"Corporate culture" is the fundamental character or spirit of an organization that influences the loyalty and general behavior of its employees. When you learn how to combine the right corporate culture with the right core values, your organization will thrive regardless of the challenges it faces.

One problem I see in most companies today is they create a mission statement only because it's fashionable to do so ... but they stop there. Some may even go so far as to create a list of core values to help guide their leadership and employees... but they fail to follow them. I see lots of mission, vision and value statements on corporate websites, but the majority of employees in any company cannot recite any of them.

Several months ago, one of my clients wanted me to work with their senior management team to identify ways they could create better employee engagement. An anonymous survey was conducted, and it turned up some alarming comments. Over 50% of their employees stated that the company:

- Isn't results-oriented
- Doesn't celebrate accomplishments
- Doesn't have training for growth
- Doesn't allow them to generate ideas
- Isn't empowering them
- Has leaders who play favorites
- Has leaders whose actions do not match their words
- Doesn't involve them in the decisions that affect their jobs
- Doesn't keep them informed about changes or important issues

This company has five excellent "Guiding Principles" (core values) that address all these issues, but they weren't being followed. What most companies don't understand is that their "corporate culture" is in the hands of local middle management. In other words, your

corporate culture is your LOCAL BOSS. They are responsible for making sure your guiding principles, core values, and mission and vision statements are being followed.

Last week I did a program for Herr Foods. Herr Foods understands the importance of living their core values. They have been in business for over 70 years and have over 1,500 employees. Their formula for success is based on the acronym L.O.V.E., which stands for:

L - Live
O - Our
V - Values
E - Every day

A recent Gallup poll found that only 34% of workers are committed to their company and are enthusiastic about their work. That means 66% are NOT engaged; they are just going through the motions, collecting a paycheck.

As you look to the future, recognize that the principles that are instrumental to your success must be communicated throughout your organization on a constant basis. They should not only be part of your new employee training; they should also be part of every meeting, deeply rooted into every decision you make.

When your corporate culture is right, employees working for you no longer have jobs; in their minds, THEY HAVE CAREERS.

Robert Stevenson is one of the most widely recognized professional speakers in the world. Author of the books *How To Soar Like An Eagle In A World Full Of Turkeys* and *52 Essential Habits For Success*, he's shared the podium with esteemed figures from across the country, including former President George H.W. Bush, former Secretary of State Colin Powell, Tony Robbins, Tom Peters and Stephen Covey. Today, he travels the world, sharing powerful ideas for achieving excellence, both personally and professionally.

■ Don't Make This Critical Mistake In Your Business

Upward of 41% of companies don't train their HR staff on data security. This is from a recent survey from GetApp. On top of this, 55% of HR staff don't see internal data security as an issue.

HR departments often handle sensitive data and should take IT security very seriously. If a hacker were to get ahold of employee data, it could be potentially devastating to affected employees and to the company as a whole – and it could set up the company for a major lawsuit on the part of the employees.

The liability by itself isn't worth it and neither is taking on the risk by not investing in data security. Data protection needs to be in place – along with employee training. Everyone, including HR, should be on the same page, and every company should adopt strong data security and policy to go along with it. *Small Business Trends*, Nov. 30, 2019

■ Follow This One Rule When Sending E-Mails

We all use e-mail, and we all spend too much time reading and responding to these messages (one estimate cited by Inc. suggests the average office worker spends 2 1/2 hours per day reading and responding to e-mails).

Wasn't e-mail supposed to save time? It can if you follow one important rule. It's all about streamlining your process. That rule? The CC rule.

It works like this: If you expect a reply from a recipient, you put their name in the "to" field. If you want to add more people to read your message but don't need a reply from them, put them in the "CC" field.

However, for the rule to work, everyone in the e-mail has to know how it works. If the e-mail is addressed "to" you, respond. If not and you're just CC'd, do not respond. *Simple. Inc.*, Dec. 10, 2019
